

VoltVibe Device Trade-In Program Guidelines and Valuation Index

1. Program Overview & Eligibility Requirements

The VoltVibe Smartphone Trade-In Program is designed to enable registered customers to leverage their older smartphone hardware to acquire credit toward purchasing new VoltVibe products. To participate in the program, customers must initiate a trade-in request through their customer dashboard. To qualify for any trade-in credit valuation, devices must meet strict baseline eligibility requirements. The device must: power on, boot completely to the primary operating system, operate stably on battery power without being plugged into a continuous external power source, possess a fully functional display digitizer, and have zero cracks on either the display assembly or the rear protective casing glass. Furthermore, the device must be fully factory reset, and all cloud-based security activation locks (such as Apple iCloud Activation Lock, Google Device Protection, or Samsung Knox locks) must be completely disabled and unlinked from the account. Devices that fail to meet these absolute requirements are ineligible for standard valuation and are classified under salvage guidelines (see Section 3.2).

2. Smartphone Trade-In Base Valuation Index

Base valuations represent the maximum possible store credit payout for a device in functional condition with minimal cosmetic wear. Credit values are determined by model and storage capacity, and are paid exclusively as non-transferable VoltVibe Store Credit. The standard base valuations are outlined in the matrix below:

Device Model	128GB Storage	256GB Storage	512GB Storage
VibePhone 12 Pro	\$250.00	\$300.00	\$380.00
VibePhone 13 Pro	\$340.00	\$410.00	\$500.00
S-Series Neo X	\$180.00	\$220.00	\$290.00
S-Series Ultra 22	\$280.00	\$340.00	\$430.00

3. Value Deductions and Grading Criteria

- During physical inspection at our central receiving warehouse, devices are audited for physical wear and battery health. Any deviation from pristine condition results in percentage deductions applied to the base valuation:
- **Minor Screen Scratches (No Cracks):** A flat 15% deduction is applied if there are light scuffs on the display panel.
 - **Casing Dents and Paint Scuffs:** A 10% deduction is applied if the outer frame shows visible wear or cosmetic blemishes exceeding 2 mm.

- **Battery Capacity Degradation:** If the device's remaining maximum chemical capacity is between 80% and 84% (Grade C battery health, see doc_09_refurbished_grades.pdf), a 20% deduction is applied. Batteries under 80% result in a flat 30% replacement deduction.
- **Missing Tray or Loose Buttons:** A 15% deduction is applied for loose physical buttons or missing original SIM/microSD trays.

3.1 Accumulation of Deductions

Deductions are cumulative, up to a maximum cap of 50% of the base valuation. For example, if a VibePhone 13 Pro (128GB, Base \$340.00) has minor screen scratches (-15%) and a degraded battery under 80% (-30%), the total deduction is 45%. The final trade-in offer would be calculated as \$340.00 minus 45% (\$153.00), yielding a final payout of \$187.00 USD in store credit.

3.2 Salvage Grade / Recyclable Only Threshold

If a device fails to turn on, is blacklisted by cellular carriers (reported stolen/lost), contains a cracked display panel, shows severe screen burn-in (ghosting), or has a non-functional digitizer, it is classified as 'Recyclable Only.' Recyclable devices do not qualify for percentage-based trade-in credits and are awarded a flat \$15.00 USD salvage store credit to encourage eco-friendly recycling. The shipping cost to return a rejected salvage device must be covered by the customer if they choose not to recycle it, as detailed in Section 4.2.

4. Shipping Kits, Valuation Locking, and Depreciations

Once a trade-in is requested, VoltVibe will mail the customer a structured shipping kit containing a custom padded box, protective foam inserts, and a pre-paid shipping label. The customer must package the device and drop it off at an authorized carrier collection point.

4.1 The 21-Day Lock Window and New Release Depreciations

Standard trade-in valuations are locked for exactly 21 calendar days from the date the request is initiated online. To preserve the estimated valuation, the carrier scan showing shipment acceptance must occur within this 21-day window. **THE NEW RELEASE DEPRECIATION EXCLUSION:** Notwithstanding the 21-day lock window guarantee, if VoltVibe releases a new generation of hardware (specifically a new model of VibePhone) during the customer's lock window, all pending valuations for previous-generation devices are immediately depreciated by a flat 25% from the initial locked estimate, regardless of the remaining days in the customer's lock window. This policy is necessary to account for the sudden decline in secondary market value when new product generations are introduced.

4.2 Insufficient Packaging Transit Damage Clause

CRITICAL SHIPPING EXCLUSION: It is the customer's absolute responsibility to utilize the protective foam inserts included in the VoltVibe shipping kit. If a trade-in device arrives at our warehouse physically damaged (e.g., cracked glass) due to insufficient packaging (such as failing to use the provided foam sheets or shipping the device loose in a standard envelope), the trade-in valuation will be immediately downgraded to the Recyclable Only flat rate (\$15.00). In this scenario, VoltVibe will not assume liability for transit damages, and this policy explicitly overrides the general transit insurance rules outlined in doc_21_transit_insurance_claims.pdf.

5. Store Credit Payouts & Regional Regulations

Once the device is inspected and the final value is accepted by the customer, store credits are credited to the user's account within 10 business days of device receipt at our warehouse.

5.1 Store Credit Restrictions

VoltVibe Store Credit generated through the trade-in program is non-transferable and valid for a maximum of 365 calendar days from the date of issue. Store credits cannot be used to purchase VoltVibe Gift Cards (as governed by doc_04_gift_card_terms.pdf), nor can they be used to pay for shipping insurance premiums (under doc_21_transit_insurance_claims.pdf). Store credits must be applied to physical product purchases (such as new power stations, adapters, or cables) on the VoltVibe online store.

5.2 Cash-Out Statutory Thresholds

REGIONAL COMPLIANCE OVERRIDE: By default, VoltVibe trade-in credits cannot be redeemed for cash or cash equivalents. However, under statutory regulations in the State of Washington (RCW 19.240) and the State of California (Civil Code 1749.5), if the customer's total remaining trade-in store credit balance falls below \$10.00 USD, the customer may request the balance to be refunded as a cash payout (processed as a physical check mailed to the customer's primary address, or a credit to their original payment card). To request a cash-out, customers must contact our billing compliance department and submit proof of residency in an eligible state.
